Daniel Okafor

Lagos, Nigeria | daniel.okafor@example.com | +234 803 555 2198 | linkedin.com/in/danielokafor

PROFESSIONAL SUMMARY

Data Scientist specializing in machine learning, natural language processing, and recommendation systems. Experienced in transforming large datasets into predictive products and deploying models through APIs. Strong Python programming background with practical experience in deep learning and production-oriented machine learning.

EDUCATION

- MSc in Artificial Intelligence — University of Lagos | 2022–2024
- BEng in Computer Engineering — Federal University of Technology, Owerri | 2017–2022

PROFESSIONAL EXPERIENCE

Machine Learning Engineer — Digital Commerce Labs, Lagos | Jul 2024–Present

- Developed recommendation models using customer interactions, product metadata, and purchase history.
- Built NLP pipelines for classifying customer support messages and extracting key topics.
- Developed REST APIs with FastAPI for serving machine learning predictions.
- Used Docker and Git-based workflows to package and deploy analytical applications.
- Monitored model performance and investigated data drift after deployment.

Data Science Intern — FinTech Solutions Africa | Jun 2023–Jun 2024

- Prepared financial transaction datasets for machine learning applications.
- Built fraud-risk classification models and compared logistic regression, random forest, and gradient boosting.
- Performed exploratory data analysis and created visualizations for model diagnostics.
- Collaborated with software engineers to integrate model outputs into internal applications.

SELECTED DATA SCIENCE PROJECTS

- Transaction Fraud Detection — Trained supervised classification models on highly imbalanced transaction data and evaluated precision, recall, F1-score, and PR-AUC.
- Customer Support Text Classifier — Developed an NLP pipeline using TF-IDF and transformer embeddings to classify support tickets by issue category.
- Product Recommendation Engine — Built a hybrid recommendation prototype combining collaborative filtering with product attributes.

TECHNICAL SKILLS

Python, SQL, PyTorch, TensorFlow, scikit-learn, pandas, NLP, transformers, machine learning, deep learning, FastAPI, Docker, Git, PostgreSQL, REST APIs, AWS, data visualization
