# Grace Mwangi

Nairobi, Kenya | grace.mwangi@example.com | +254 712 640 882 | linkedin.com/in/gracemwangi

## PROFESSIONAL SUMMARY

Data Scientist with a strong foundation in statistics, econometrics, and applied machine learning. Experienced with agricultural and economic datasets, impact evaluation, predictive analytics, and communicating evidence to policy and program teams. Interested in applying data science to resource allocation and program outcomes.

## EDUCATION

- MSc in Applied Statistics — University of Nairobi | 2020–2022
- BA in Economics and Statistics — Kenyatta University | 2016–2020

## PROFESSIONAL EXPERIENCE

**Data Scientist — AgriData Research Initiative, Nairobi | Feb 2023–Present**

- Built predictive models to estimate crop yields using weather, soil, farm-management, and historical production data.
- Applied regression, random forest, and gradient boosting methods to agricultural datasets.
- Designed data-quality checks for survey and field data collected from multiple regions.
- Used statistical analysis and visualization to support program evaluation and resource allocation.
- Prepared technical reports and presented results to researchers, program managers, and policy stakeholders.

**Research Analyst — East Africa Policy Centre | Sep 2020–Jan 2023**

- Analyzed household survey and economic datasets using R, Python, and Stata.
- Performed hypothesis testing, regression analysis, and impact evaluation.
- Cleaned and documented datasets from multiple research projects.
- Produced statistical tables, charts, and research briefs for decision-makers.

## SELECTED DATA SCIENCE PROJECTS

- Crop Yield Prediction — Developed a machine learning pipeline to predict maize yield from environmental and farm-level variables; compared linear regression, random forest, and gradient boosting.
- Program Impact Evaluation — Estimated the effect of an agricultural training program using regression and propensity-score methods.
- Food Price Monitoring Dashboard — Combined market-price data from multiple locations and created an interactive R dashboard showing price trends and regional differences.

## TECHNICAL SKILLS

Python, R, SQL, pandas, scikit-learn, tidyverse, statistics, econometrics, regression, hypothesis testing, causal inference, machine learning, data visualization, R Shiny, Power BI, Git, PostgreSQL, Excel
